Middle Go Backend Developer | Remote | Kyiv

PROFESSIONAL SUMMARY

Middle Go Backend Developer with 14+ months of commercial experience in fully remote teams. Delivered SaaS data-collection backends and parser integrations with Go, PostgreSQL, RabbitMQ, and AWS S3 — including RAG with vector search and MCP integrations — processing thousands of records daily.

TECHNICAL SKILLS

Languages: Go (Golang), Python, SQL | **APIs:** REST, gRPC, Gin, chi, microservices, concurrency, OpenAPI
Testing: table-driven, integration, e2e tests | **AI & data:** RAG, embeddings, vector search (pgvector), MCP
Data: PostgreSQL, Redis, RabbitMQ, NATS JetStream, sqlc | **Ops:** AWS (S3), GCP (Cloud Run), Docker, Kubernetes, CI/CD, Prometheus, Grafana

EXPERIENCE

- Beehive Logic** Apr 2026 – Present
Backend Developer Remote
 - Built and maintain Go backend services for a SaaS data-collection platform with solo ownership in a remote team of 2–5
 - Designed and implemented a bounded Go worker pool with slot leasing, per-subscription in-flight deduplication, cancellation-safe backpressure, and Prometheus saturation metrics for a B2B parcel-tracking pipeline; production metrics showed approximately 200 concurrent status checks per instance across three replicas, and daily saturation nearly disappeared after capacity tuning
 - Profiled and optimized PostgreSQL bottlenecks in Go microservices with EXPLAIN (ANALYZE, BUFFERS), focusing on paged list queries and index fit
 - Implemented parser pipelines with CAPTCHA/proxy handling using Gin/chi, processing thousands of records daily for I/O-heavy workloads
 - Built MCP servers for external tools in production ingestion workflows; integrated RabbitMQ and AWS S3 with Prometheus metrics and OpenAPI-documented REST APIs in Docker-based deployments
 - Wrote table-driven, integration, and e2e tests for Go backend and parser services
- Freelance** Nov 2025 – May 2026
Backend Developer Remote
 - Delivered data parsers and automation workflows across 3–5 NDA client projects, each processing thousands of records daily
 - Designed CI/CD pipelines with Docker for repeatable Go/Python backend deployments
- Cabina.ai** Apr 2025 – Nov 2025
Back-end Developer Remote
 - Implemented end-to-end RAG with embeddings and pgvector in PostgreSQL (Go), indexing thousands of documents; integrated Meta messaging APIs (Facebook, WhatsApp, Instagram)
 - Delivered production Go services with PostgreSQL and Redis handling thousands of API requests daily; documented REST APIs with OpenAPI and used Prometheus for observability

PROJECTS

- GitHub Releases Observer**
Go, PostgreSQL, Redis, gRPC, Prometheus, GCP Cloud Run — github.com/RozhkoDmytro/github-releases-observer
Built and deployed a production Go monolith (REST API, release scanner, email notifier) to Cloud Run with OpenAPI, sqlc, Redis, CI/CD, and Prometheus
- User Activity Tracker**
Go, PostgreSQL, NATS JetStream, Prometheus, Docker — github.com/RozhkoDmytro/UserActivityTracker
Built high-throughput event collection service (API + worker) with NATS JetStream, sqlc, uber/fx, and Prometheus/Grafana observability

EDUCATION

- Taras Shevchenko National University of Kyiv** 2005 – 2009
Cybernetics, Mathematical Computing Kyiv, Ukraine

CERTIFICATIONS & LANGUAGES

FoxmindEd — Go (Sep 2024 – Mar 2025) · SoftServe — Python, ML fundamentals (scikit-learn, model training) (Jun 2024 – Sep 2024) · English B1+ · Ukrainian native
Prior career: 15+ years enterprise IT before 2025 (details available on request).
